

HAMBER UNDERFLOOR SAFES

An underfloor safe is installed beneath your floor, encased within reinforced concrete. It's inconspicuous, space saving and unlike a traditional floor standing safe, cannot be simply lifted away by a burglar. It offers the benefits of almost complete concealment with immense strength.

Hamber have been making the very best underfloor safes for over 60 years, and each safe is individually built by hand by artisan engineers here in the UK, using the very finest materials available.

Packed with features to resist the most severe types of criminal attack, easy to install and simple to use, they offer the ultimate protection for your most precious things.

“Hamber Safes are rightly called the ‘Rolls Royce’ of underfloor safes”

Dick Ardenburg
CEO, TMA Kluizen
European Security Consultant

OUR RANGE

Hamber underfloor safes have a minimum 'manufacturer's recommended cash rating' of £35,000 (£350,000 for jewellery and valuables) and are suitable for the secure storage of all types of valuables including cash, jewellery, watches, coins, bullion, cryptocurrency wallets etc.

They are packed with integrated features designed to resist criminal attacks by drilling, abrasive cutting, flame cutting, lock tampering, heavy impact, leverage, wedging and fire (including insurance recognised 'VdS' Class 2 and 3 locks, huge stainless steel locking bolts, thick stainless steel doors, 're-locking' mechanisms, and many other special measures).

MINDER

All time best-selling hand-built underfloor safe and the choice of thousands of customers for over 60 years. Packed with integrated security features.

**Photo shows optional quick-drop 'deposit tube' (available in all ranges).*

CARETAKER

Designed for larger valuables. No other square door underfloor safe comes close to the quality of the hand-built Caretaker.

DREADNOUGHT ABP

The ultimate hand-built underfloor safe, with an unrivalled technical specification. VdS Class 3 lock, 'ABP' protection to resist flame-cutting equipment, and constructed using military grade materials that resist drilling and cutting.

**All safes are supplied with a connecting underfloor neck section and floor level dust cover, not shown above.*

All models are simple to use with just one hand and they are designed for simple retrofitting into existing homes or during the construction of new homes (in any floor type, modern or period, concrete or wooden). Full instructions are provided for DIY installation. Alternatively a discrete installation service is often available.

Storage vaults are available in various sizes (from 8 litre to 42 litre capacity) and safes can be built with different locking options (key or dial combination). A 'quick deposit tube' option is also available that allows valuables to be secured without the need to unlock the safe.
